

Get Tested for Hepatitis C!

Hepatitis C is a liver disease caused by the Hepatitis C virus. It is often symptomless but rarely harmless. Anyone who has been exposed to contaminated blood or needles — through drug use, tattoos, body piercing or other contact — can be infected. Hepatitis C can also be acquired through sexual contact.

**Think you may be at risk?
Get tested. It could save your life.**

The test is also recommended for *anyone* born between 1945 and 1965.

The Comprehensive Liver Program at Montefiore Medical Center offers simple and effective testing.

Talk to your primary care physician or contact us at 888-RX-LIVER (888-795-4837) for more information.

To watch our video on Hepatitis C or to learn more about our program, visit www.montefiore.org/hepc
